---

A question arose from someone on the Weston staff about how we used the air samplers during the Las Conchas fire. I believe this was in trying to respond to a NMED question. Attached is a brief description from one of our staff on air sampler operation theory at the fire and two procedures on using equipment associated with the air samplers. I hope this answers your questions.

Gregg

Attached is the CF-903 procedure. You may want to look over what I wrote. Also, I have attached the procedures we used for the response - SOP CER- 220 (Environmental Sampling Procedure) and SOP CER-205 ( Operation of Air Samplers without Flow Measurement Capability).
